Artifact and jewelry asset tracking solution providing 24/7 visibility

Reliable RFID-enabled display for secure management of valuable assets

SmartShowcase™ provides complete security and automated inventory management. Each item is tracked in real-time using advanced hands-free radio-frequency identification (RFID) technology that is simple and intuitive to use. It only requires network connectivity and power to operate.

SmartShowcase™

Maintain the highest security levels.

Anytime an item leaves its case, complete electronic security is monitoring whether an item is on a Bluetooth connected showing pad, in someone's hand or walking out the door. A digital signature is used to verify personnel authorization for accessing the display case. Electronic alerts (sent to appropriate authorities) along with alarms provides the real-time ability to thwart unauthorized movements of valuable artifacts and jewelry.

With real-time feedback and online reports about which items are being viewed and who's showing them, owners have everything they need to maximize display space needed.

SmartShowcase™ is available in a variety of sizes, typically ranging from 24" D x 36" to 72" W. Customized versions are also available. Electronic locking and digital access control is included to manage who can access the case and when. An optional remote display pad is available to monitor out of the case movements for viewing. The display case can optionally be manufactured with wheels for mobility as well as a self-contained storage vault so that the artifacts and jewelry are mechanically lowered and vaulted during off hours.
